Materials, Components & Solutions

Quality for life

Explanations of hazardous material symbols

(risk and safety phrases)*

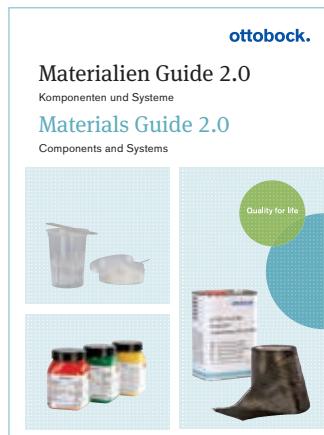

Hazard classes	Hazard categories
Inflammable gases	1
Inflammable aerosols	1, 2
Inflammable liquids	1, 2, 3
Inflammable solids	1, 2
Self-decomposing substances and mixtures	Types B, C, D, E, F
Pyrophoric liquids	1
Pyrophoric solids	1
Substances and mixtures capable of self-heating	1, 2
Substances and mixtures that release inflammable gases upon contact with water	1, 2, 3
Organic peroxides	Types B, C, D, E, F
Oxidising gases	1
Oxidising liquids	1, 2, 3
Oxidising solids	1, 2, 3
Acute toxicity (oral, dermal, inhalative)	4
Skin irritation	2
Eye irritation	2
Skin sensitisation	1
Specific target organ toxicity (one-time exposure)	3
Respiratory system irritation	
Anaesthetic effects	
Hazardous to water	
– Acutely hazardous to water	1
– Chronically hazardous to water	1, 2

* The hazardous substance symbols printed in the product information correspond to the labelling requirements for hazardous substances at the time of printing. They refer to the raw materials. Changes reserved.

► Please note that the base colours shown in the product information may differ in actual effect.

Materials with Skin Contact

CE Marking

Medical devices are not permitted to endanger the health of users or third parties at any time. In addition, the risks generally associated with their use always have to be justifiable compared to the benefits. This is why medical devices are subject to the provisions of the MPG (Medical Products Law), and certain safety criteria must be met to bring them into circulation. This is confirmed by the visible CE marking. Ottobock declares with sole responsibility that all medical devices that are manufactured by Ottobock and bear the CE marking conform with the basic requirements of Council Directive 93/42/EEC of 14 June 1993 on medical devices.

Material Compatibility

The EN ISO 10993 standard applies for the assessment of the biological compatibility of medical devices. The standard classifies medical devices according to the type and duration of intended body contact and identifies biological risks which must be evaluated according to the respective category of the product in question.

The purpose of the biological assessment is to determine whether physiological hazards are expected from the medical device or its materials as a result of contact with the patient. Accordingly, the tests pursuant to EN ISO 10993 Part 5 (Cytotoxicity) and EN ISO 10993 Part 10 (Irritation and Sensitisation) are relevant for Ottobock materials with skin contact.

Cytotoxicity Test (EN ISO 10993 Part 5)

The cytotoxicity test is recognised and required as a biological base test for all medical devices and their materials. The use of cell cultures, makes it possible to provide evidence of any toxic effect to cells, that arise from substances dissolving out of the material during the intended use. Solids are extracted with culture media or other suitable solvents; these solids are then used in the examination.

The cytotoxicity test offers indications of the biological compatibility of materials used to manufacture medical devices. Relevant Ottobock materials have successfully passed this test; therefore, no cytotoxicity effect is expected. The biological compatibility of the relevant Ottobock materials is confirmed in accordance with Directive EN ISO 10993 Part 5 or by equivalent data.

Irritation and Sensitisation Test (EN ISO 10993 Part 10)

The most common test method is the patch test. The patch test is a provocation test used to determine if there is a contact allergy. In this test, the test specimens or extracts are applied exclusively to the skin. As a rule, the test substances are applied to a test patch that has been especially prepared and is applied "on the skin" (=epicutaneous) in the upper back region of the patient. The patch is then left on for 48 hours before it is removed. 15 to 30 minutes after the patch is removed, the doctor examines the area of skin for possible changes (reddening, swelling); this examination is repeated after two to three days and possibly again later. The patch test is indicative of the biological compatibility of materials for the production of medical devices. Relevant Ottobock materials have successfully passed this test, so that skin irritation or allergic sensitisation are not expected. The biological compatibility of the relevant Ottobock materials is confirmed in accordance with Directive EN ISO 10993 Part 10 or by equivalent data.

Hazardous Substances

Your Needs

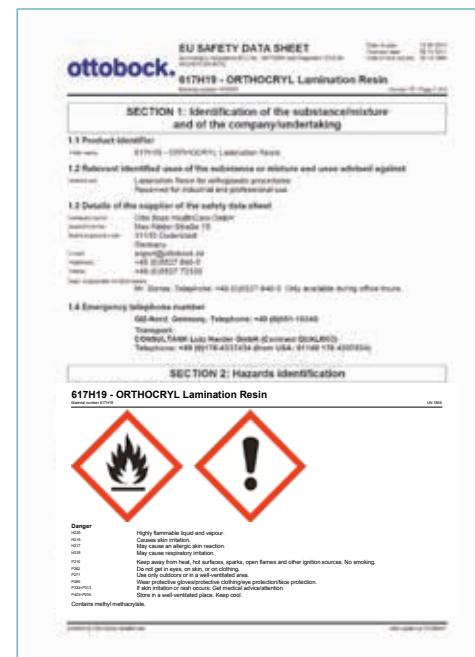

The first and most important step in the safe use of chemicals is to be aware of their identity, the associated risks to health and the environment and the means to control these risks. This inherently complex knowledge must be organised so that essential information on hazards and the corresponding protective measures can be identified and communicated to the user in a readily comprehensible manner.

The Ottobock Solution

As a global player, we obligate ourselves to safeguard and protect the health of people and the environment in which we work. With us, you will make safety, environmental protection and health integral parts of the production, sale and use of our products. Ottobock hazardous substances are accompanied by safety data sheets (SDS). These safety data sheets contain information such as physical data, health risks, first aid measures, storage, disposal and protective equipment. Ottobock can provide you with safety data sheets for all hazardous substances in your language and country-specific version.

Advantages for You

We offer you absolute reliability, safety and guaranteed availability. Electronically provided safety data sheets comply with the right-to-know provisions for immediate access to risk information around the clock. Make use of the most up-to-date database of safety data sheets on our website, which we update regularly for you. We are also able to provide you with the safety data sheets on CD-ROM (article number 646C16). The advantage of the CD-ROM is that you can prepare chemical or product-specific general instructions for use and utilise them in your orthopaedics workshop.

699G19/699G20/699G21

Biplatix® Quick Plaster Bandage

Order example				
Reference number	=	Length	x	Width
699G19	=	2	x	6
Reference number	699G19			
Length	2 m			
Width	6 cm, 8 cm, 10 cm, 12 cm, 15 cm			
Order by	Package of 20 (sealed @ 2 bandages)			
Reference number	699G20			
Length	3 m			
Width	8 cm, 10 cm, 12 cm, 15 cm, 20 cm			
Order by	Package of 10 or 20 (sealed @ 2 bandages)			
Reference number	699G21			
Length	25 m			
Width	10 cm, 12 cm, 15 cm, 20 cm			
Order by	Package of 1 (4 layers)			

Areas of Application

- For taking a plaster cast

Benefits

- Consists of a cotton substrate coated with a special natural plaster blend
- Latex-free
- Very easy moulding
- Minimised dipping losses
- Easy to process
- Ensures high final strength, even with few layers
- Also available as 699G21 Longuette for individual cutting

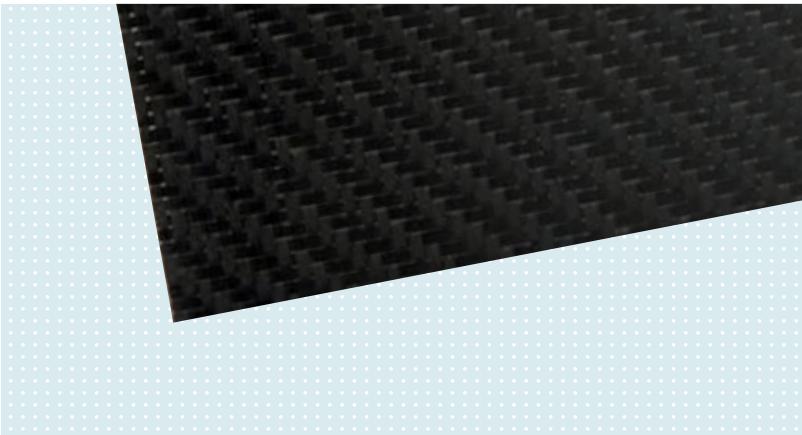

Processing

- Dipping water temperature: 20 °C to 25 °C (68 °F to 77 °F)
- Working time: approx. 2 minutes
- Load bearing capacity: partial load after 30 minutes, full load after 48 hours

Biplatix® is a registered trademark of BSN medical.

617R15=5

TP.C Carbon Fibre Woven

Areas of Application

- For high-strength, very thin orthoses based on thermoplastic materials

Benefits

- Matrix: TPU
- Can be thermoformed under pressure
- High tensile strength
- Suitable for surfaces
- Paintable
- Potentially adhesive
- Can be welded with components of the same matrix
- Clean processing
- No special storage requirements (e.g. no cooling)

Processing

- Moderate temperature recommendation:
approx. 220 °C / 428 °F

Article number	617R15=5
Thickness	approx. 0.25 mm
Area per package	5.16 m ²
Package	12 sheets á 1.000 mm x 430 mm per sheet
Fibre weight per unit area	200 g/m ²
Fibre content	60% by weight
Resin content	40% by weight
Bond type	Twill 2/2

616T111

ThermoLyn supra soft plus Silicone

EVA with silicone

Areas of Application

- For fabricating highly flexible inner sockets for the thigh

Benefits

- EVA with silicone
- Very high flexibility
- Facilitates the fabrication of more comfortable socket rims
- High surface quality
- Comfortable to wear
- Good grinding characteristics
- Washable

Processing

- Temperature recommendation: 150 °C / 302 °F (convection oven, infrared oven)

-----------	--------------------------	------	------------------

Colour	transparent (99)	transparent (99), black (7)	skin coloured (0)
--------	------------------	-----------------------------	-------------------

Areas of Application

- For fabricating of shoe-insoles
- For fabricating of flexible diagnostic/definitive sockets for foot prostheses
- For fabricating of flexible diagnostic sockets for lower and upper limb prostheses
- For fabricating of water-resistant splints and supports
- For fabricating of flaps and closures for orthoses
- For flexible prim designs for orthoses

Benefits

- Permanently elastic
- Dimensionally stable
- High friction
- More comfortable socket edge design
- Comfortable to wear
- Large choice of colours
- Washable
- Subsequent welding possible
- Can be bonded to itself when heated

Temperature recommendation

- 100-130 °C / 212-266 °F (heating plate)
- 80-100 °C / 175-212 °F (infrared oven)
- 100-120 °C / 212-248 °F (convection oven)

5.5 Dark Blue Translucent

3.4 Neon Green

2 Red

17 Gold

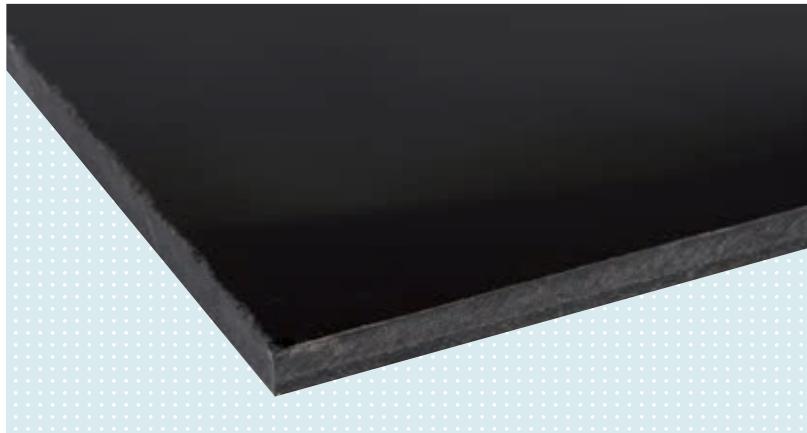

Practical recommendation

- For use on smooth, dry and porous plaster casts (87G2)
- Use a brush to apply a thin layer of Araform Parting Agent (84A4=12) on the plaster cast, then polish
- Short transfer distance from oven to model
- Do not use talcum powder
- While heating it in the oven, use a clean and smooth parting film as underlay
- While later welding of lamination discs, reinforcement bars, etc. leave model under vacuum to guarantee dimensional stability
- While welding the material, avoid inclusions of air

616T690

ThermoLyn soft, black

PE-C

Areas of Application

- Suitable for fabricating flexible inner prosthetic sockets in lower limb prosthetics
- Sheet size of 1225x1225 mm is particularly well suited for the fabrication of HD sockets

Benefits

- High flexibility
- Low density for especially low weight
- High tensile strength
- Odour-neutral
- High surface quality
- Can be subsequently thermoformed
- Comfortable to wear
- Washable

Processing

- Temperature recommendation: 130 °C / 266 °F
(convection oven, infrared oven)

617H255

C-Orthocryl SKINGUARD

	Resin 100	:	Hardener 2-3	:	Resin Colour Paste 3
--	--------------	---	-----------------	---	-------------------------

Danger

Practical recommendation

- Casting carbon on carbon, no filter layers are required
- For sheet casting, use only 616F4 PVA Sheeting or 99B81 PVA Bags
- 642K13 Filling Set is available for containers 25 kg and over.

Areas of Application

- Lamination resin for carbon fibre technology

Benefits

- Antibacterial effect
- Facilitates fabricating components with a low proportion of resin
- Optimum ratio of matrix to reinforcing materials

Article number	617H255=0.900	617H255=4.600	617H255=25

617H119

Orthocryl Lamination Resin 80:20 PRO

	Resin 100	:	Hardener 2-3	:	Resin Colour Paste 3
--	--------------	---	-----------------	---	-------------------------

Danger

Practical recommendation

- For sheet casting, use only 616F4 PVA Sheeting or 99B81 PVA Bags
- 642K13 Filling Set is available for containers 25 kg.
- In order to ensure that all air bubbles are eliminated from the reinforcement, the following has to be observed:
 - Make sure that the plaster model is under a constant vacuum from the outset.
 - Cast the resin all at once, and not gradually, which is done with conventional resins.

Areas of Application

- Lamination resin for the fabrication of components with a low proportion of resin

Benefits

- Low viscosity with the same mechanical characteristics as 617H19
- Better penetration of the reinforcement
- Rapid evacuation of air from the reinforcement
- The air that is pushed out and subsequently rises can escape from the resin during lamination and is not locked into the resin. This increases the quality and stability of the end result
- Hardener/colour pastes are easier to mix

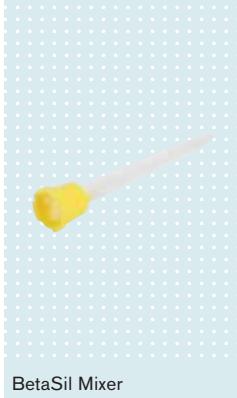

Available information materials:

616S5/616S6

BetaSil Kit

Areas of Application

- For customising a standard liner made of silicone (616S5=1: 1 spray gun, 15 mixers, 3 cartridges)
- For fabricating silicone pads (616S5=2: 1 spray gun, 20 mixers, 5 cartridges)
- Bonds with other silicones (85H11 Pastasil or 85P31 Chlorosil) and adheres to other synthetic materials, provided these have a rough surface

Benefits

- 2-component silicone
- Ready to use
- Clean processing regardless of environment
- Curing time is about 5 minutes so that sufficient processing time remains even on elaborate casts
- Static mixer tubes under article number 756Y75 are also available individually

Article number	616S5=1	616S5=2
Consisting of	1 spray gun, 15 mixers, 3 cartridges	1 spray gun, 20 mixers, 5 cartridges
Refill Pack: BetaSil		
Article number	616S6=1	616S6=2

647G637=1	BetaSil Instructions for use to customise a standard silicone liner
647G637=2	BetaSil Instructions for use to fabricate silicone pads
646D717=EN	Folder BetaSil

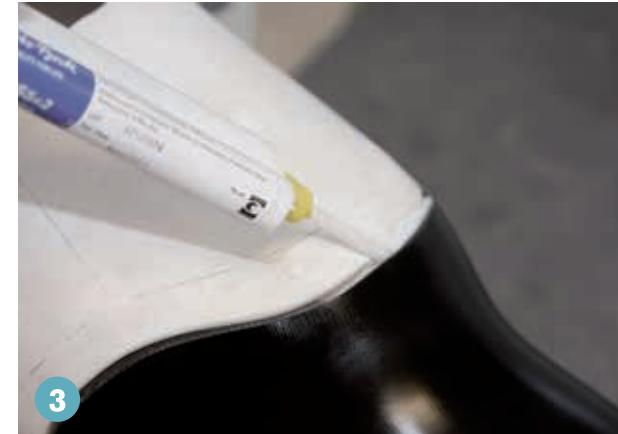

Processing for 616S5=2
Fabrication of silicone inserts

1

2

3

1 Reinforce the socket in the usual manner, recess only the required area and strengthen with 616G26=150 Polyester Spacer Fabric, then laminate.

2 Apply a dummy made of 85H11 Pastasil in the intended position. After curing, cut to size, sand and roughen from the outside. Also roughen the casting and clean with 634A58 Isopropyl Alcohol. Place the Pastasil dummy, reinforce in the usual manner and then over-laminate.

3 Remove the Pastasil dummy, cut free the recess and sand the socket edge. Position the socket on the plaster model or duplicating foam. Fill the resulting pocket with 616S5 BetaSil from the distal side to the proximal side, thereby introducing the static mixer into the pocket at the beginning all the way to the lower end of the pocket. After vulcanisation of the BetaSil insert, sand it and position it at the intended point in the socket.

Processing for 616S5=1

Customising a standard liner made of silicone

1 Check the fit of the liner on the patient and trim the liner if necessary.

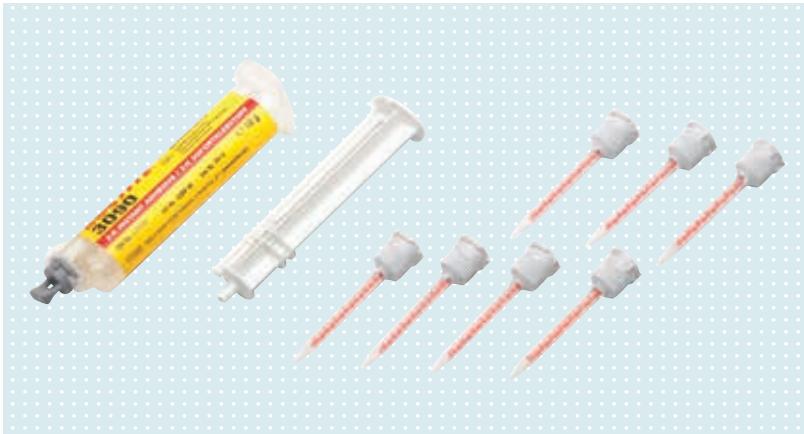

2 Clean the entire area of the liner where BetaSil will be applied with 634A58 Isopropyl Alcohol. Allow the liner to air dry for at least 5 minutes. Apply the BetaSil to the desired area of skin, e.g. scar tissue.

3 Skim off the excess material with your finger, pull on the liner and, after 15 to 20 minutes, remove the liner and turn it inside-out.

Trim the BetaSil with scissors or sand it with a sanding sleeve.

636K44

Loctite® 3090

Warning

Areas of Application

- For various applications
- Outstanding adhesive properties on many different materials (e.g. metal, PVC, ABS, PC, PBT, rubber, wood, paper, cardboard, leather and textiles)
- To fill large gaps up to 5 mm

Benefits

- Innovative two-component technology
- Activator permits maximum control of the setting speed so that setting does not depend on the temperature, humidity, etc.
- High adhesive strength
- Quick curing
- Viscosity is a gel consistency and therefore thixotropic
- Faster, simpler and more effective work
- Practical syringe packaging for precise and clean application
- Static mixers ensure a controlled mixing ratio

Processing

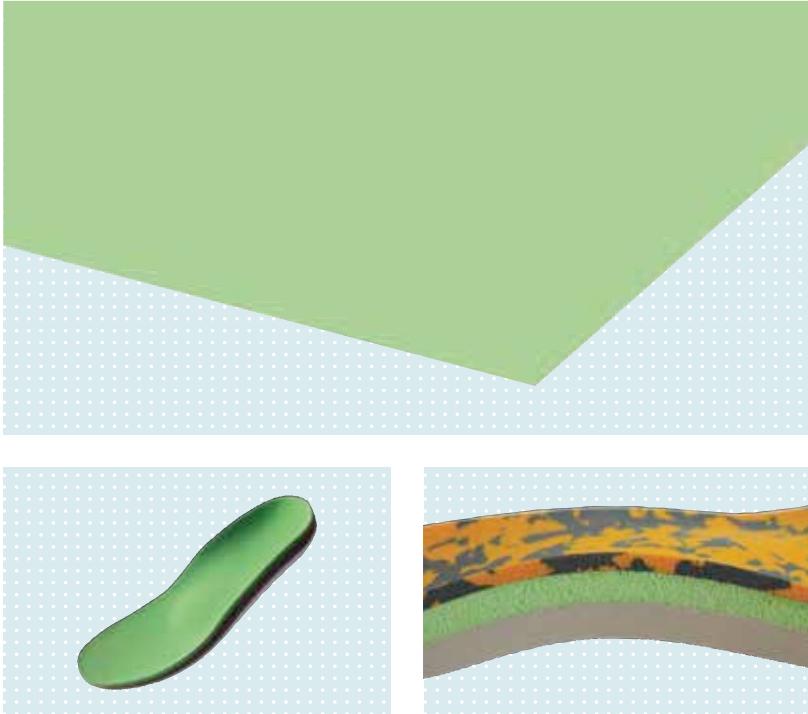

- Processing time 90 – 180 sec.
- Functional strength 2 – 4 min.
- Initial strength 3 – 5 min.
- Final strength 24 h
- Temperature stability -20 °C to +80 °C/-4 °F to +176 °F
(short-term up to 100 °C/212 °F)
- Discard the first 2–3 drops from the mixer
- Hold the joined components in position until they are secured
- The adhesive develops intense heat briefly while setting

Article number	636K44
Net contents	10 g
Packaging	1 cartridge, 1 plunger, 7 static mixers
Colour	Clear (after setting: clear/slightly cloudy)

Loctite® is a registered trademark of Loctite.

617S173

Nora® Aero sorb, soft

Reference number	=	Thickness	-	Colour
617S173	=	2	-	3
Reference number	617S173			
Length	820 mm			
Width	580 mm			
Thickness	2 mm, 3 mm, 4 mm, 6 mm, 8 mm			
Colour	green (3)			

Areas of Application

- Particularly recommended for butterfly rolls, heel and forefoot padding
- Foot bed adapted for diabetic patients
- Heel spur recess with heel spur insoles

Benefits

- Light cellular rubber, closed-cell
- Hardness approx. Shore A 8; Shore A zero 22
- Density approx. 150 kg/m³
- Delayed resilience
- Good thermoforming properties
- Good adhesive characteristics
- Good sanding characteristics
- Washable
- Hygienic, can be disinfected
- Bedding and damping properties; point pressure relief
- Shock absorbent

Processing

- Temperature recommendation: 110 °C - 130 °C / 230 °F - 266 °F (hotplate, convection oven)

617S133=7

Nora® Lunatec Combi 7

Areas of Application

- For inserts and soft sockets

Benefits

- EVA copolymer, closed-cell
- Hardness approx. shore A 30 (skin-coloured)
- Hardness approx. shore A 40 (grey)
- One-step processing
- No gluing required and no displacement of the different materials during processing
- High retention of volume because the material is only compressed where needed and no vacuum forming is required
- Good padding characteristics
- Good thermoforming properties
- Good adhesive and sanding characteristics
- Washable

Processing

- Temperature recommendation:
130 °C - 150 °C / 266 °F - 302 °F

--------	--

Practical recommendation

- Warm the thermoplastic sheet material until it becomes completely transparent. Cut the thermopaper to size and apply it, with the design facing down, onto the precut component; carefully smooth the thermopaper from the middle towards the outside edges. After approx. 20 seconds, pull the thermopaper off the material.

Areas of Application

- For individually dyeing thermoplastics such as ThermoLyn PE 200, ThermoLyn PP-C and ThermoLyn PP-H

Benefits

- Extensive choice of designs
- No additional workshop equipment or special technical knowledge required
- Environmentally friendly paper

623S*

Ottobock Collection Socket Decors

Practical recommendation

- In order to laminate socket decors, they may be sewn up and used as the first and/or last layer of the laminate like a stockinette, with the design facing the visible side.

Areas of Application

- For individual dyeing with lamination technique

Benefits

- Extensive choice of designs
- No additional workshop equipment or special technical knowledge required

CarbonTEX

Order example

Reference number	=	Length	-	Colour
616G120=	=	5	-	16
Reference number	616G120=2-*	616G120=5-*	616G120=10-*	
Length	2 m	5 m	10 m	
Width	1 m	1 m	1 m	
Colour	Red (2), Green (3), Blue (5)			
Reference number	616G180=2-*	616G180=5-*	616G180=10-*	
Length	2 m	5 m	10 m	
Width	1 m	1 m	1 m	
Colour	Light Red (2.4), Silver (16), Light Silver (16.4)			

Practical recommendation

- Can be used with acrylic, epoxy and polyester resin solutions
- Suitable for decorative purposes but not as structural laminate component
- Laminate without colour paste to prevent distortion of the colour result
- Processing: Directly after cutting to size/sanding the socket, apply a transparent acrylic coating to the proximal edge. We recommend applying at least two layers and using wet/dry fine sandpaper between the layers. This approach is particularly well suited for sealing the upper socket edge. The outside appearance of the upgraded socket is also optimised as a result.

2 Red

3 Green

5 Blue

2.4 Light Red

16 Silver

16.4 Light Silver

Areas of Application

- For individual dyeing with lamination technology

Benefits

- Good absorption of all Ottobock lamination resins
- Good draping characteristics
- Conventional lamination process
- No additional technical knowledge or workshop facilities required
- Extensive choice of designs

Available information materials:

Article no. **Description**

646D696=EN Product Information for Finishing

646D718=EN Product Information 617H119 Orthocryl Lamination Resin 80:20 PRO

Processing

1

Sand the surface of the socket being laminated, clean with Isopropyl Alcohol (634A58) and mark the position of the subsequent CarbonTEX seam on the socket with a pencil.

Measure the socket length and circumference. Cut a corresponding piece of CarbonTEX with a width and length that is 10 cm larger than the respective measurement. To prevent the fibres from fraying, tape off the outside of the cut edges.

1 Apply Spray Adhesive for joints that can be disassembled (636K40) to the socket, starting on the side opposite the marked CarbonTEX seam. Then continue wetting the socket gradually, applying the layer of CarbonTEX around the socket without wrinkles and pressing it into place in the direction of the seam.

2

2 Attach one end of the layer of CarbonTEX to the previously marked seam with Double-Sided PVC Adhesive Tape (616F10=6) and trim the excess material with Carbon Scissors (719S21). Then press any protruding fibres in place again. Repeat this procedure on the opposite side. In order to do so, apply a new strip of PVC adhesive tape to the cut edge of the CarbonTEX side. Overlap and attach the second end of the layer of CarbonTEX, trim the excess material and press any protruding fibres in place.

Chemical protection gloves (641H17), protective eyewear and a breathing mask should be worn for occupational safety reasons. Perform all process steps under an extractor hood.

3

3 Clean the soaked PVA Bag (616F4) with paper towel on both sides and pull it over the model with the desired side (matt or gloss). Tie off the PVA bag on the proximal end. Tie off temporarily in the distal region and create a vacuum.

Mix the desired quantity of Orthocryl Lamination Resin 80:20 PRO (617H119), without adding colour paste, with 2% hardener and fill into the bag. Then tie off above the resin filling, without any air inclusions. Orient the model as shown in Figure 3. Undo the temporary tie in the distal area between the resin and socket, and extract rising air bubbles with the vacuum. Then laminate the socket, with the even penetration of resin running at a 90° angle to the socket axis.

After hardening, cut the socket and sand it down.

514Z8

SafeLock Buckle

Areas of Application

- Magnetic closure that engages mechanically for use in orthosis fabrication

Benefits

- Plastic
- Self-actuating, secure closing through magnetism
- Easy, intuitive opening with one hand by pushing open sideways
- Notch on the reverse side of the closure for straightforward positioning of the closure with a hollow rivet
- Different sizes for strap widths of 20, 30 and 40 mm
- Suitable for hand, shoulder, torso, knee and ankle orthoses depending on the size
- Robust and durable
- High load capacity (minimum 55 kg)

Application Example

170D29

Y-Hook-and-Loop with PU Coating

Practical recommendation

- We recommend using micro hook-and-loop on velour and hook on loop.

Areas of Application

- For adapting straps, e.g., directly on the patient
- Particularly well suited for 623Z96 Loop-Velour Strap
- For closure types with higher loads, e.g. walking orthoses
- For fast, detachable connections

Benefits

- Polyester with PU coating
- Micro hook-and-loop/micro hook-and-loop (single side: heavy hook-and-loop)
- Various widths available
- Low bulk with the use of micro hook-and-loop only
- User-friendly design with "Open" embossing
- Easy to clean thanks to PU coating
- Washable with a damp cloth
- Can be refastened many times
- Flexible
- Very comfortable

Order example

Reference number	=	Width	-	Colour
170D29	=	30	-	0

Reference number	170D29
Width	30 mm, 38 mm, 50 mm
Colour	skin coloured (0), black (7)

623Z96

Loop-Velour Strap

Practical recommendation

- We recommend using micro hook-and-loop on velour and hook on loop.

Areas of Application

- Ideal for orthosis straps
- For closure types with higher loads, e.g. walking orthoses
- For fast, detachable connections

Benefits

- Woven polyamide bordered in velour
- Various widths and colours available
- Individually adaptable length
- Both sides compatible with hook-and-loop
- Can be refastened many times
- Flexible
- Very comfortable
- Washable at 30 °C/86 °F, gentle cycle

Order example

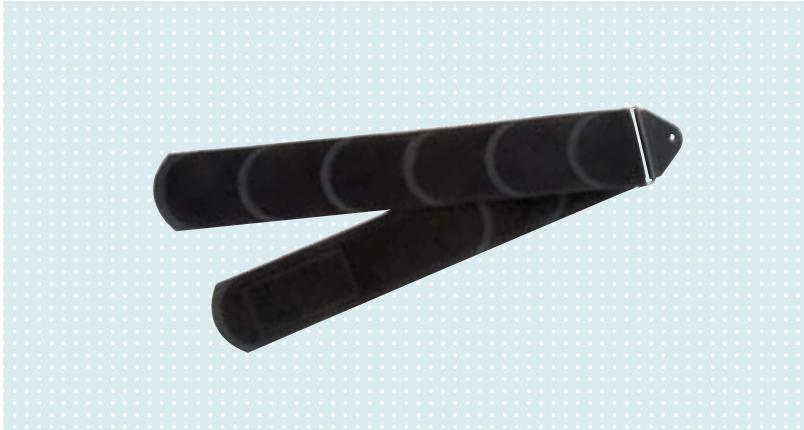

Reference number	=	Width	-	Colour
623Z96	=	30	-	0

Reference number	623Z96
Width	30 mm, 38 mm, 50 mm

21Y78

Hook-and-Loop Closure with Weld Seams

Areas of Application

- For fast, detachable connections

Benefits

- With strap guide loop
- Hook-and-loop strap
- 100% polyamide
- Individually adaptable length due to welding seam
- Can be refastened many times
- High hook-and-loop strength
- Very good inherent stiffness
- Flexible
- Skin-friendly thanks to velour
- Hook-and-loop closure washable at 30 °C/86 °F, gentle cycle

Order example

Reference number	=	Length	-	Width	-	Colour
21Y78	=	420	-	40	-	7

Reference number	21Y78
Length	420 mm, 650 mm

Areas of Application

- To reduce rotation movements and pistoning in transfemoral prostheses
- For the transfer of force and fixation of the prosthesis on the body
- To improve guiding and control of the prosthesis

Benefits

- Custom sizes available (depending e.g. on the side, socket edge)
- Intuitive closure on the pelvic strap with hook-and-loop straps and buckles for a custom fit
- High hook-and-loop strength
- The breathable, thin pelvic strap made of polyamide and spandex is very comfortable to wear
- Low weight makes body perception and control possible
- High abrasion resistance of the pelvic belt
- Extra padding for the hip bones
- Secure hold of the prosthesis due to Neopren® adhesive strip at the distal end of the harness
- Latex-free
- Robust and durable
- Good shape retention
- Machine washable at 40 °C/104 °F, gentle cycle

21B3

Neopren® AK Suspension

Areas of Application

- To reduce rotation movements and pistoning in transfemoral prostheses
- For the transfer of force and fixation of the prosthesis on the body
- To improve guiding and control of the prosthesis

Benefits

- Universal in application for the left and right sides; available in various sizes
- Incl. hook-and-loop-compatible closure for an adjustable fit
- Intuitive closure
- High hook-and-loop strength
- Circular strap around the pelvis made of double laminated Neopren®
- Extra padding for the hip bones
- Secure hold of the prosthesis due to Neopren® adhesive strip at the distal end of the harness
- Latex-free
- Good shape retention
- Machine washable at 40 °C/104 °F, gentle cycle

OC1560

EasyFit Arm Donning Sheath

Areas of Application

- Enables easy donning of arm prostheses with a valve opening

Benefits

- Kids' size available
- Easy, time and energy saving donning
- Comfortable feeling when donning
- High-quality, durable material
- Suitable for machine washing
- Foldable and lightweight

Article number	Size	Colour	Limb circumference		Limb length
			proximal	distal

OC1560=TR	TR		42 cm	22 cm	25 cm
OC1560=TH	TH		47 cm	28 cm	34 cm

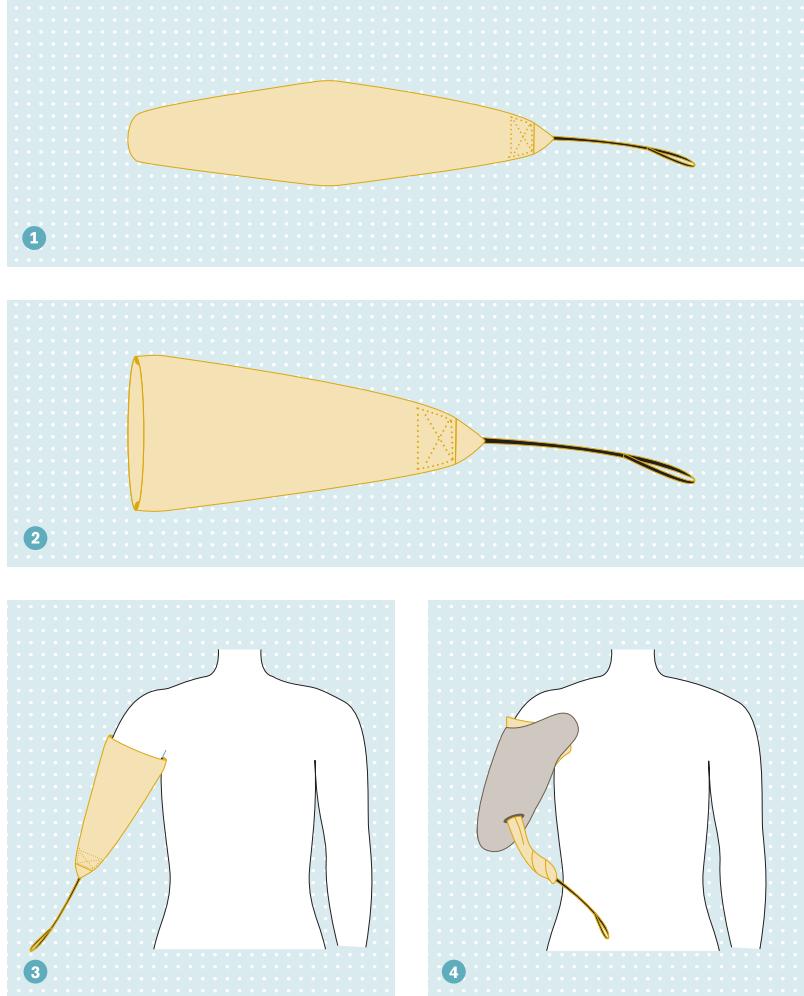

Available information materials:

Article no.	Description
646D536=EN	Product Information EasyFit Arm Donning Sheath

Application

- 1 Before using the EasyFit Arm, fully spread out the Donning Sheath.
- 2 Turn half the length of the EasyFit Arm Donning Sheath into the other half up to the lower seam (loop on the outside).
- 3 Pull the EasyFit Arm Donning Sheath over the residual limb of the arm like a sock, with as few wrinkles as possible. Slide the socket over the residual limb so that the loop of the EasyFit Arm Donning Sheath can be pulled through the valve opening of the socket after donning.
- 4 Slowly pull the EasyFit Arm Donning Sheath through the valve opening of the prosthetic socket by the loop.

If the residual limb is not properly positioned in the prosthetic socket, repeat the process.

OC1560

EasyFit Donning Sheath

Practical recommendation

- Using the EasyFit Donning Sheath in combination with the threadless 21Y14 PushValve exhaust valve makes prosthesis donning even easier.

Areas of Application

- For transfemoral prostheses with valve opening

Benefits

- Easy, time and energy saving donning
- Comfortable feeling when donning
- Pull-through aid for additional help
- High-quality, durable material
- Suitable for machine washing
- Lightweight and foldable, includes a sealable bag for easy transportation

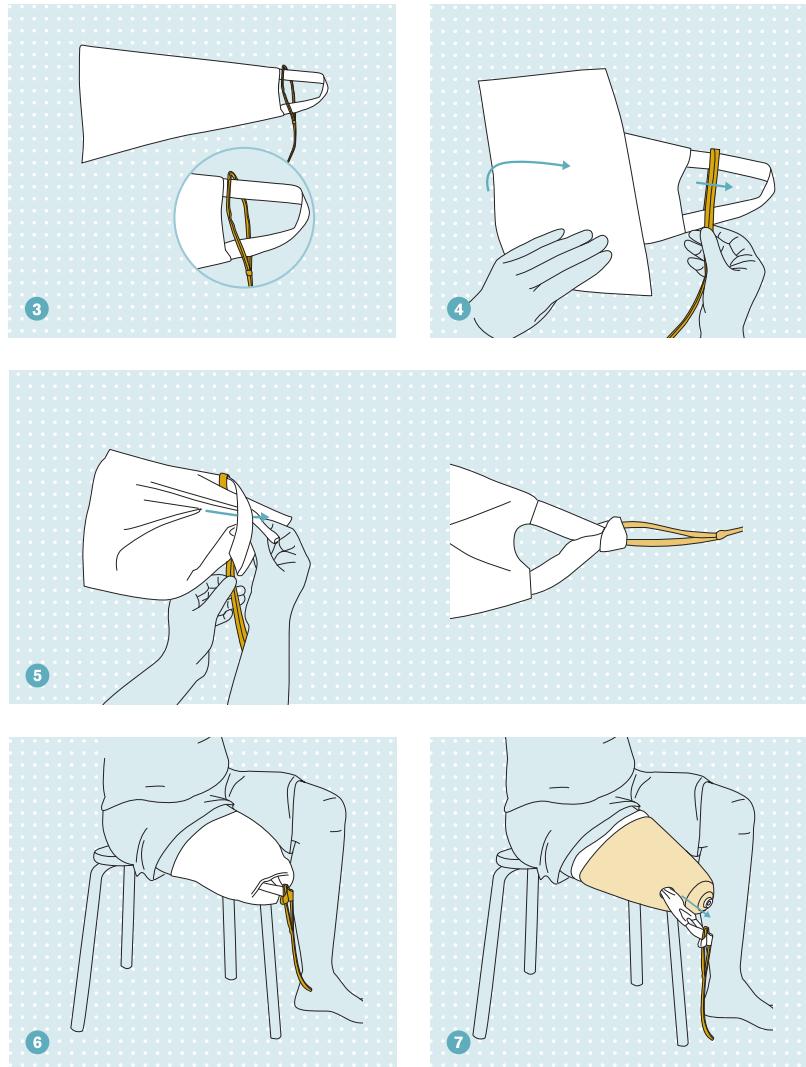

Article number	Size	Colour	Limb circumference proximal	Limb circumference distal	Limb length
OC1560=XS	XS		39 cm	25 cm	40 cm
OC1560=S	S		43 cm	27 cm	
OC1560=M	M	Blue	56 cm	29 cm	
OC1560=L	L		68 cm	36 cm	43 cm
OC1560=XL	XL		78 cm	36 cm	
OC1560=XXL	XXL		80 cm	36 cm	60 cm

Available information materials:

Article no.	Description
646D386=GB	Product Information EasyFit

Application

- 1 Spread out the EasyFit donning sheath and the included pull-through aid.
- 2 Turn one half of the EasyFit donning sheath into the other half up to the lower seam. The loop should face outwards.
- 3 For additional help, attach the pull-through aid: pull the strap on the donning sheath through the loop on the pull-through aid.
- 4 Pull the top half of the donning sheath through the lower gap between the strap and the loop.
- 5 The pull-through aid and the strap of the donning sheath are now joined to each other.
- 6 Now pull the EasyFit donning sheath with both hands like a sock over the transfemoral residual limb, avoiding any wrinkles. Position the socket over the residual limb so that after getting into the socket the strap of the EasyFit donning sheath or the pull-through aid can be put through the socket's valve hole.
- 7 Finally, use the strap to slowly pull the EasyFit donning sheath out of the prosthetic socket through the valve opening.

Width 400 mm

Thickness 8 mm, 10 mm, 12 mm, 15 mm

Colour clear

Practical recommendation

- For working edges we recommend hot air or 634A1 SuperSkin Cleaning Agent

Areas of Application

- Suitable for the fabrication of self-supporting TT, TF and HD check sockets (for temporary use)

Benefits

- The proven, classic material for fabricating check sockets!
- Transparency of the check socket facilitates precise verification of the fit and skin discolouration on the residual limb
- High stiffness
- Good fracture resistance
- High thermoplastic dimensional stability
- High resistance to the formation of stress cracks
- Extremely high impact strength
- Can be over-laminated to secure adapters
- Minor shrinkage

Processing

Danger

Practical recommendation

- For sheet casting, use only 616F4 PVA Sheeting or 99B81 PVA Bags
- 642K13 Filling Set is available for containers 25 kg.

Areas of Application

- The proven classic material for laminating!

Benefits

- Optimum ratio 80:20 for making stiff laminates (with 20% 617H17 Orthocryl®, soft)
- Can be combined with all common reinforcing materials in orthopaedics technology

Available information materials:

Danger

Practical recommendation

- Casting carbon on carbon, no filter layers are required
- For sheet casting, use only 616F4 PVA Sheeting or 99B81 PVA Bags
- The 642K13 Filling Set is available for containers 25 kg.

Areas of Application

- Lamination resin for carbon fibre technology

Benefits

- Facilitates fabricating components with a low proportion of resin
- Optimum ratio of matrix to reinforcing materials

99B81	KAFO	130 cm	22 cm, 26 cm	5 cm	10 pcs.

Areas of Application

- For work with Orthocryl and polyester lamination resins

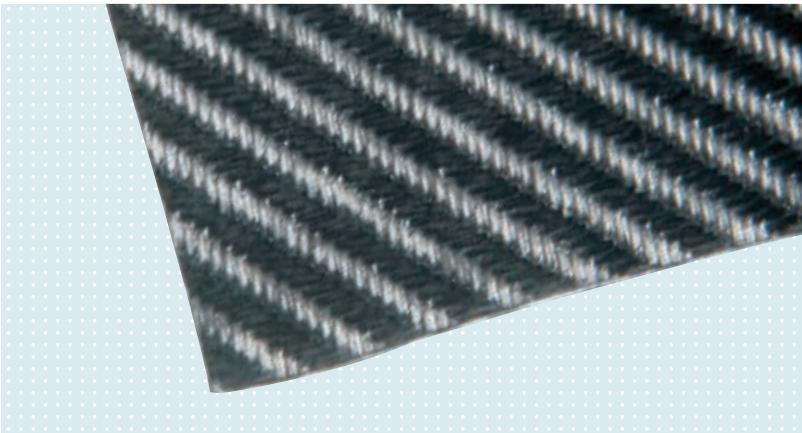

Benefits

- Sizes available for all amputation and orthosis types
- Film adapts to contours extremely well
- Easy to weld with the 756E1 Hand Sealing Iron
- Good stretching properties
- High resistance to tearing

617S3 Pedilin

PROVEN
CLASSIC

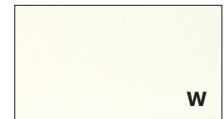

Areas of Application

- Highly recommended for fabricating soft inner sockets and as a padding material for prosthetic sockets

Benefits

- The proven classic material for soft sockets!
- PE foam, closed-cell
- Hardness approx. Shore A 35 (proven Shore hardness for fabricating soft sockets)
- Density approx. 140 kg/m³
- High resilience
- Good thermoforming properties
- Good adhesive characteristics
- Good sanding characteristics
- Washable

Processing

- Temperature recommendation: 130 °C / 266 °F
(heating plate, convection oven)
